Normative Theories Normative theories serve as a benchmark for ideal accounting practices. They are prescriptive, suggesting how accounting should be performed to achieve fairness, transparency, and efficiency. Positive Theories Positive theories are descriptive, focusing on actual behaviors and practices within the accounting profession. They

analyze why certain standards are adopted and how managers might manipulate earnings or report information strategically. These theories help explain the realities of practice, often highlighting conflicts between different stakeholder interests.

Stakeholder and Legitimacy Theories Stakeholder theory expands the scope of financial reporting beyond shareholders to include employees, customers, regulators, communities, and environmental groups. It emphasizes that organizations must consider the needs and expectations of all stakeholders to maintain legitimacy and social license to operate. Legitimacy theory suggests that organizations use financial reporting to create a favorable image and validate their existence and actions within society. It highlights how accounting can be used as a tool for impression management and social acceptance.

Application of Deegan's Theories in Modern Financial Reporting Deegan's theories are not purely academic; they have practical implications for how companies prepare and present financial statements today.

Regulation and the Role of Standard-Setters The book explores the influence of regulatory bodies and standard-setters in creating a consistent accounting environment. It discusses how standardization aims to reduce information asymmetry and improve comparability, but also how standards may be influenced by political and economic interests.

Environmental and Social Accounting An emerging area discussed in Deegan 2nd is sustainability reporting and the integration of environmental, social, and governance (ESG) factors into financial statements.
