Sample Worked Solution: Particle in Uniform Circular Motion

Problem Statement A particle

moves in a horizontal circle of radius 5 m with a constant speed of 10 m/s. Determine the acceleration of the particle and the magnitude of the net force acting on it.

Step-by-Step Solution

Identify Known and Unknowns: Radius, $r = 5$ m; Speed, $v = 10$ m/s; Acceleration, $a = ?$; Net force, $F = ?$

Diagram and Coordinates: Draw the circle with the particle at a point, indicating direction of motion.

Apply Kinematic Relations: For uniform circular motion, the centripetal acceleration: $a = \frac{v^2}{r}$

Substitute known values: $a = \frac{(10)^2}{5} = \frac{100}{5} = 20$ $\frac{\text{m}}{\text{s}^2}$

Determine the Net Force: Using Newton's second law: $F = m \times a$

Assume the mass of the particle is given or take an arbitrary value for illustration, say $(m = 2, \text{kg})$: $F = 2 \times 20 = 40$ N

The direction of the force is toward the center of the circle.

Final Results: Acceleration: 20 m/s^2 directed towards the center; Force: 40 N directed centripetally

This example demonstrates how to systematically approach a fundamental problem in dynamics, emphasizing clarity and logical progression.
